

Enterprise 2.0 – How it coincides with Industry 4.0.

What is it?

“Enterprise 2.0 is the emergent social software platforms within companies or between companies and their partners or customers”.

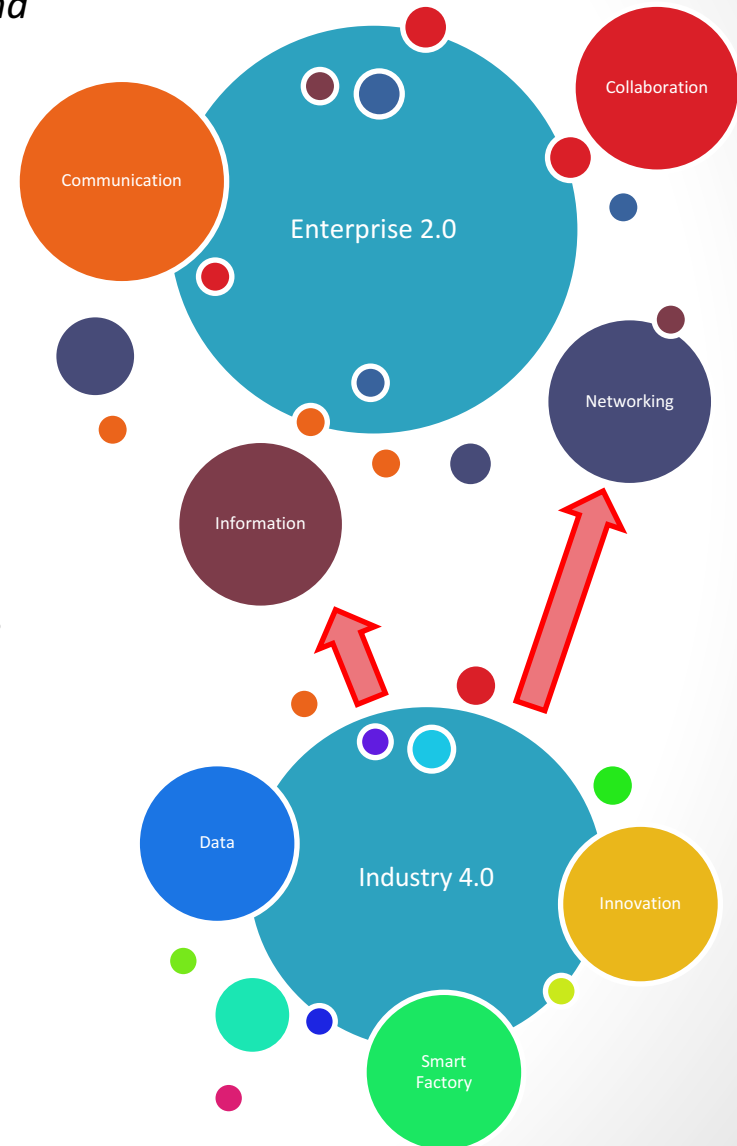

Industry 4.0 is the digital transformation of industrial companies.

Are they linked?

Both rely on people using the information gained and then networking to relay the results or look for solutions to problems found.

Where is it going?

Enterprise 2.0 and Industry 4.0 will help introduce smart factories which will see computers and robotics connected remotely and learning how to require little input from humans.

Enterprise 2.0

Advantages

More transparency

Better communication

More innovation

Productivity

Disadvantages

Security

Reliability

Loss of control

Productivity
